

What No One Told Us About Abortion

PHYSICALLY, mothers are put into premature labor or their cervix stretched to dismember, poison, starve, crush, or stab a child prior to or during birth. **57,000 women die** from abortion every year (WHO, 2019) More than **5 million women** are admitted to hospitals annually due to complications from an abortion (WHO, 2019). Multiple studies link breast cancer to early miscarriage of a first pregnancy. Dangers of abortion include hemorrhage, infection, perforation of the uterus, infertility, and death. Natural childbirth or C-section intended to save the life of the child are also safer for the mother than abortion procedures intended to kill the child.

PSYCHOLOGICALLY, 81% of women who electively terminate a pregnancy experience psychological problems following. **55% of women seek psychiatric care** following an abortion when they never indicated needing it before. Women who abort a child have higher rates of anxiety (34%), depression (37%), addictions (110% alcohol, 230% marijuana), and increased risk of suicide (155%). Women who have experienced an abortion have 138% higher risk of mental health problems than women who have given birth. Sixty-one percent of women expressed feeling coerced to have an abortion.

THE CHILD can feel pain as early as **7 weeks** following conception. Children have been filmed screaming and trying to move away from abortion instruments. More than **80% of initial fetal diagnostic testing showing an abnormality are wrong.** (NY Times, 2022) In the first year of legalized abortion, child abuse of born children increased by 300%. More than 60 million children have been aborted in the United States since 1973. **More than one thousand children** are abused and killed by abortion in Colorado every year. It is legal to kill a child through birth in Colorado using any means, including dismemberment, poison, scalding, cutting, stabbing, gunshot, or vehicular homicide or manslaughter. More than **99% of abortions are purely elective** and have nothing to do with the life of the mother. When the life of the mother is involved, early delivery or C-section to save a child's life are also safer for the mother. Elective abortion (intentionally molesting the child to kill) is medically unnecessary.

What No One Told Us About the Solutions to Abortion

CHURCHES

Half of women attended church in the month prior to choosing to abort their first child. Mothers with personal faith, hope, and love are less likely to abort. When at least one man in her life says he will support her and her pregnancy, she is more likely to carry.

PREGNANCY CARE CENTERS

73.8% of women who aborted children said they were not informed of other options available to them such as pregnancy help centers. There are more than 2,000 Pregnancy Help Centers across the country providing no-cost services and resources to help pregnant moms be successful mothers. Mothers with accurate information, resources, and someone to walk beside them during pregnancy are more likely to carry.

MODERN ADOPTION AGENCIES

There are approximately the same number of couples wanting to adopt a baby every year as there are abortions every year. Through Modern Adoption, mothers can choose loving parents and how involved she'd like to be in her child's life. The agencies can also help with needs and expenses related to the pregnancy. Most pregnancies in Colorado are covered by Medicaid for those making less than \$75,000 annually.

COMMUNITY RESOURCES

If a woman is poor when she's pregnant, she'll still be poor when she's not pregnant. Community resources help mothers with specific needs such as job readiness, school scholarships, health, relationships, housing, childcare, legal, automotive, clothes, food, etc., without robbing her of motherhood or taking away from her the life of her child.

CHILDBIRTH

Natural childbirth or Cesarean Section (C-Section) are safer than intentionally killing the child, as a living baby helps the mother in delivery and a C-Section is much faster and safer. Mothers who deliver report feeling happy with their decision not to abort (100%).
